Subject: Application seeking rerouting of EHV lines.

Respected Sir/Madam,

This is to bring to your kind notice that there is an EHV line passing through our school campus. The proximity of the EHV line could pose a risk on multiple fronts.

In light of our concerns, we kindly request your assistance/guidance as stated below.

Relocation or Rerouting of the Line: If feasible, we request that the EHV line be relocated away from the school premises to ensure the safety of our students and staff. This option would provide the most comprehensive resolution to our concerns.

Safety and Mitigation Options: In cases where relocation may not be immediately possible, we would be grateful if your esteemed Office could recommend and implement alternative safety measures to reduce the associated risks. Potential options may include:

1. Installation of barriers or fencing around the line to restrict access and enhance safety.
2. Insulating the line or using shielding solutions to reduce EMF exposure within the school compound.
3. Increasing the height or clearance of the line to better comply with safe distance standards.

If there are specific precautionary measures that the school administration or local community can undertake, we would be keen to implement them with guidance from your technical team. We also request the possibility of periodic safety assessments of the EHV line's impact on the school compound, ensuring that any emerging risks are promptly identified and addressed.

Yours sincerely,

Principal
